## Association Analysis

 Using sib pairs to control for stratificationMichael Neale Boulder Workshop 2001

## Association Model

## Each sib pair i has different MEANS

## Features of Association Model Attractive

- Residual variances \& covariances (R \& C)
- change
- could use linkage model for joint analysis
- Can be extended to multiple alleles, loci, phenotypes and larger pedigrees
- But assumes no population stratification

## Fulker association model

- Separate associated mean differences
- between sib pairs
- within sib pairs
- Between = within if genuine allelic effect
- Derive cunning model

## Allelic effects

Assuming additivity, unnecessarily

## Call contributions to pair sum b's Call contributions to pair diffs w's

## Pair means \& differences

| G Sib1 | G Sib2 | Pair <br> Sum/2 | Pair Diff/2 | Mean <br> Sib1 | Mean <br> Sib2 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| A1A1 | A1A1 | b | 0 | b | b |
| A1A1 | A1A2 | $\mathrm{b} / 2$ | $\mathrm{w} / 2$ | $\mathrm{~b} / 2+\mathrm{w} / 2$ | $\mathrm{~b} / 2-\mathrm{w} / 2$ |
| A1A1 | A2A2 | 0 | w | w | -w |
| A1A2 | A1A1 | $\mathrm{b} / 2$ | $-\mathrm{w} / 2$ | $\mathrm{~b} / 2-\mathrm{w} / 2$ | $\mathrm{~b} / 2+\mathrm{w} / 2$ |
| A1A2 | A1A2 | 0 | 0 | 0 | 0 |
| A1A2 | A2A2 | $-b / 2$ | $\mathrm{w} / 2$ | $\mathrm{w} / 2-\mathrm{b} / 2$ | $-b / 2-\mathrm{w} / 2$ |
| A2A2 | A1A1 | 0 | -w | -w | w |
| A2A2 | A1A2 | $-b / 2$ | $-\mathrm{w} / 2$ | $-b / 2-\mathrm{w} / 2$ | $-b / 2+\mathrm{w} / 2$ |
| A2A2 | A2A2 | $-b$ | 0 | $-b$ | $-b$ |

Within pair distance between homozygote $=\mathrm{w}$; between pairs it is b

## Mean of sib 1

$\mathrm{b}=\mathrm{w}$ (no stratification)

Genotype of sib 1

## Mean of sib 1

No w (all stratification)
 Genotype of Sib 1

## Mean of sib 1

$\mathrm{b}=5 \mathrm{w}=4$ (some of each)

Genotype of sib 1

## Fulker Association Model

Multilevel model for the means

## Conclusion <br> Association analysis

- Easy method to control for stratification
- Sibling samples are readily available
- Extensions straightforward:
- Multivariate
- Multiallelic
- Multiple sibs
